Moving, Kids, Focus*

First, our focus on security is on the infrastructure itself. So it is all about how you protect the network, the device, and the application that is riding on the server.

~John W. Thompson

We need to shift the paradigm from reactive technologies to more integrative solutions that deal with the variety and complexity of the threats that are out there today.

~John W. Thompson

So you will see us continue to advance the state of the art or take information that we have in our response data bases and have that drive automation or an automated response by some of our products.

~John W. Thompson

But what Web services suggest is that the connection is always there between an application that is resident somewhere in the cloud, and a user who is somewhere on the other end of a connection.

~John W. Thompson

If you accept that security is a process, and if you can eliminate the human interaction or intervention in that process by automating more, that is a good thing.

~John W. Thompson

First, I do not think there is any silver bullet to solving the technology side of the security equation.

~John W. Thompson

I don't think there is any franchise more powerful than ours around securing the consumer experience and we will not concede that to anyone including Microsoft.

~John W. Thompson

The U.S. and Israel probably lead the way in terms of venture investment in technologies companies focused on the security paradigm. That is quite encouraging.

~John W. Thompson

So ensuring the integrity of the data and integrity and validity of the connection is a very important element in any company's strategy that is moving towards a Web service paradigm.

~John W. Thompson

Over the near term there is clearly the opportunity to work with Microsoft to do a better job of creating a more secure Windows experience for users around the world.

~John W. Thompson

Well Web services are nothing more than a way for users to interact with applications.

~John W. Thompson

One of the things that has been truly incredible to observe though, is the amount of venture investment that has gone into early stage security technology.

~John W. Thompson
