Hepatitis C was a devastating disease but because fundamental research was done in hepatitis C, it is now curable. It is now absolutely curable with new medications. So this is transformative.

~Laurie Glimcher

The four most common cancers that account for about 80 percent of all cancer deaths are lung, breast, colorectal cancer, and prostate cancer.

~Laurie Glimcher

Once you close down your laboratory, you can't just rev it up again if you're able to finally get a grant.

~Laurie Glimcher

Cancer can no longer be classified according to the organ in which it arises. It has to be characterized in terms of the genetic mutation that exists.

~Laurie Glimcher

I like to think of making cancer a chronic disease rather than focus just on curing cancer.

~Laurie Glimcher

The key to HIV/AIDS was to say let's give a patient multiple different therapies at the same time and that makes the virus much less likely to mutate.

~Laurie Glimcher

Precision medicine is one way to attack cancer and it's proven to be very effective but, remember that like HIV/AIDS, you're going to need combination therapies.

~Laurie Glimcher

The biggest risk factor for cancer is aging.

~Laurie Glimcher

If you have a pap smear every year, there's no reason to develop cervical cancer.
